

# ACTERIS from Trenner Robotics

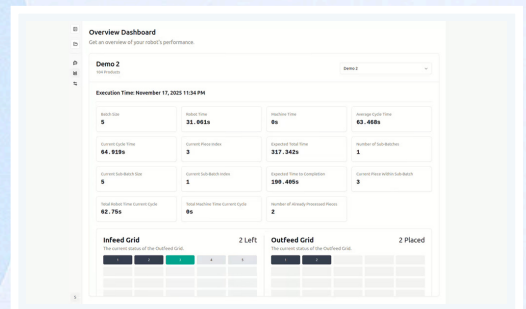

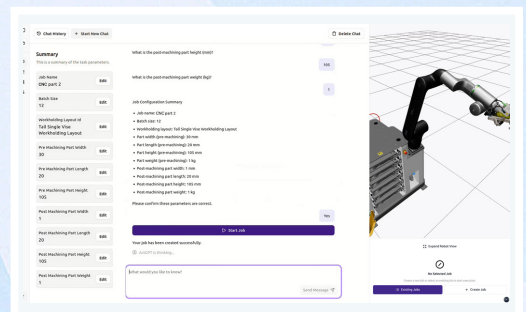

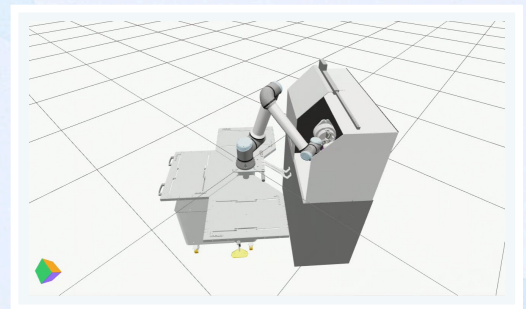

**TRENER**  
Formerly T-ROBOTICS

## AI Software for Universal Robots

Acteris is a robot application software that replaces point-to-point programming with trained, deployable, production-ready skills. These skills can be commissioned, executed, and scaled across robotic cells. Instead of rebuilding automation every time a process changes, teams operate through a repeatable software layer built for real shop-floor conditions.

### Platform features:

- AI agent interface
- Job creation & execution
- High-fidelity simulation
- Production monitoring dashboards
- Vision perception & scene understanding
- Multi-sensor contact perception

AUTOMATION MADE SIMPLE
